A Stark Difference: Drug-Related Deaths

Portugal has the lowest rate of drug-induced death in Western Europe, a small fraction of the American toll.

Deaths per million people ages 15 to 64.

2015 data except: U.S. (2016); Belgium, Britain, Denmark, Ireland, Norway, Poland, Spain (2014); France (2013)

Portugal’s approach

• Portugal undertook a monumental experiment: It decriminalized the use of all drugs in 2001, even heroin and cocaine, and unleashed a major public health campaign to tackle addiction. Ever since in Portugal, drug addiction has been treated more as a medical challenge than as a criminal justice issue.

• One attraction of the Portuguese approach is that it’s incomparably cheaper to treat people than to jail them. The Health Ministry spends less than $10 per citizen per year on its successful drug policy. Meanwhile, the U.S. has spent some $10,000 per household (more than $1 trillion)
