# RESILIENT SAFETY MANAGEMENT SYSTEMS

Ron Gantt

March 2021`

# SAFETY MANAGEMENT SYSTEMS

---

# EVERYONE AGREES

---

ANSI Z10

OHSAS 18001

**ISO 45001**

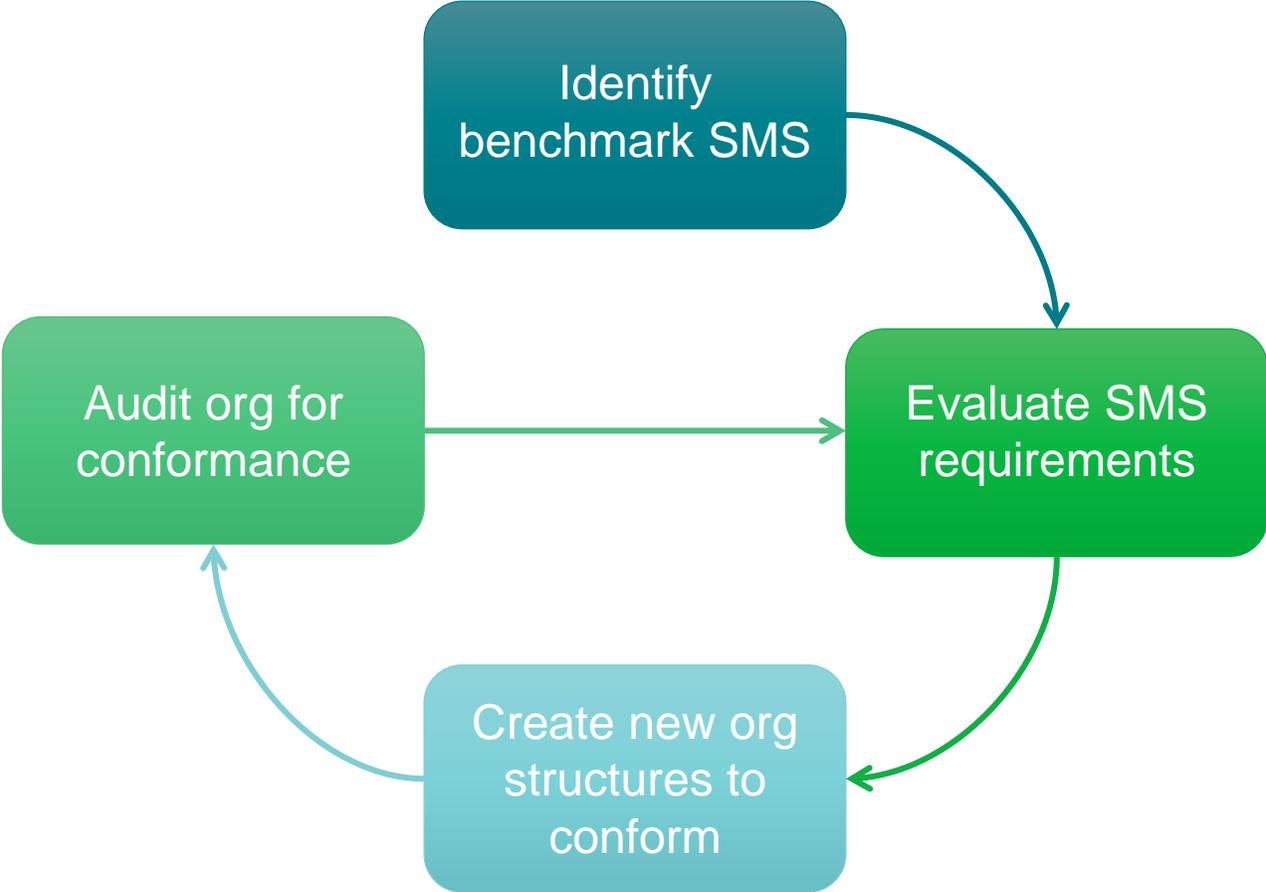

AS/NZS 4801

CSA Z1000

“The National Safety Council encourages all organizations to adopt a safety management system on their journey to safety excellence.”

# TYPICAL PROCESS

---

# BUT WAIT...

---

## 2007 systematic review of OHSMSs

“...the review concluded that the body of evidence was insufficient to make recommendations in favor of or against OHSMSs.”

## 2015 study

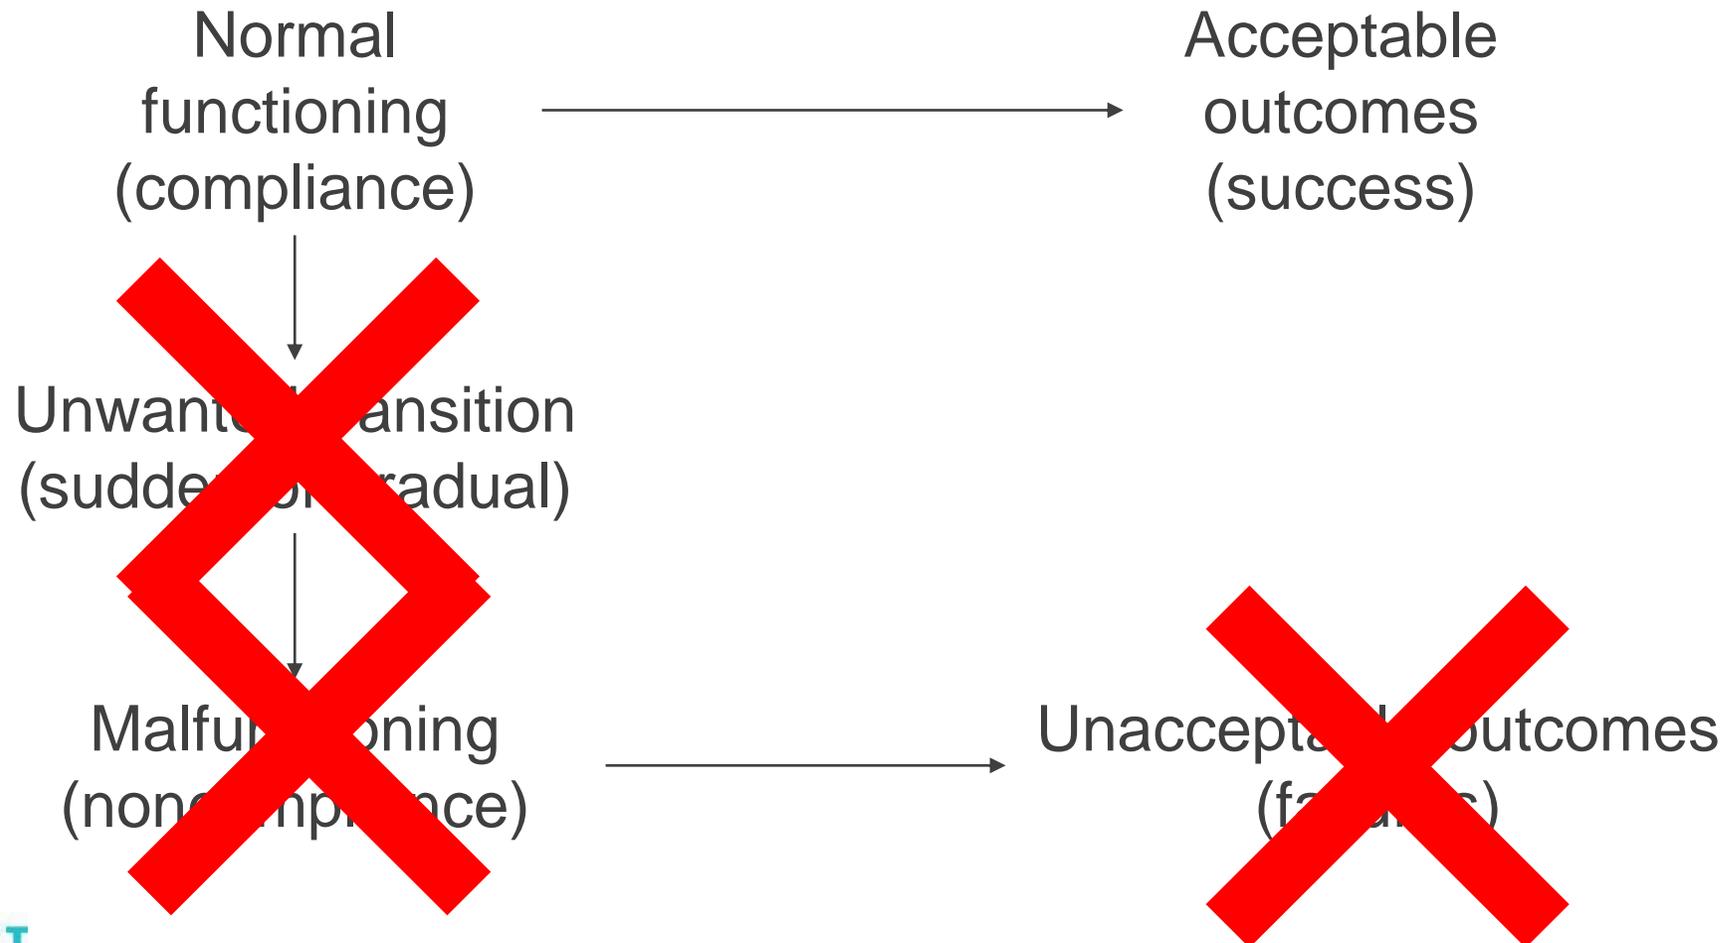

“This study showed that HSEMS was established well, which is a reflection of the efficient regulatory monitoring of parent company; however, it was not sufficient for preventing injuries and ensuring health and safety of workers.”

**WHAT'S  
HAPPENING?**

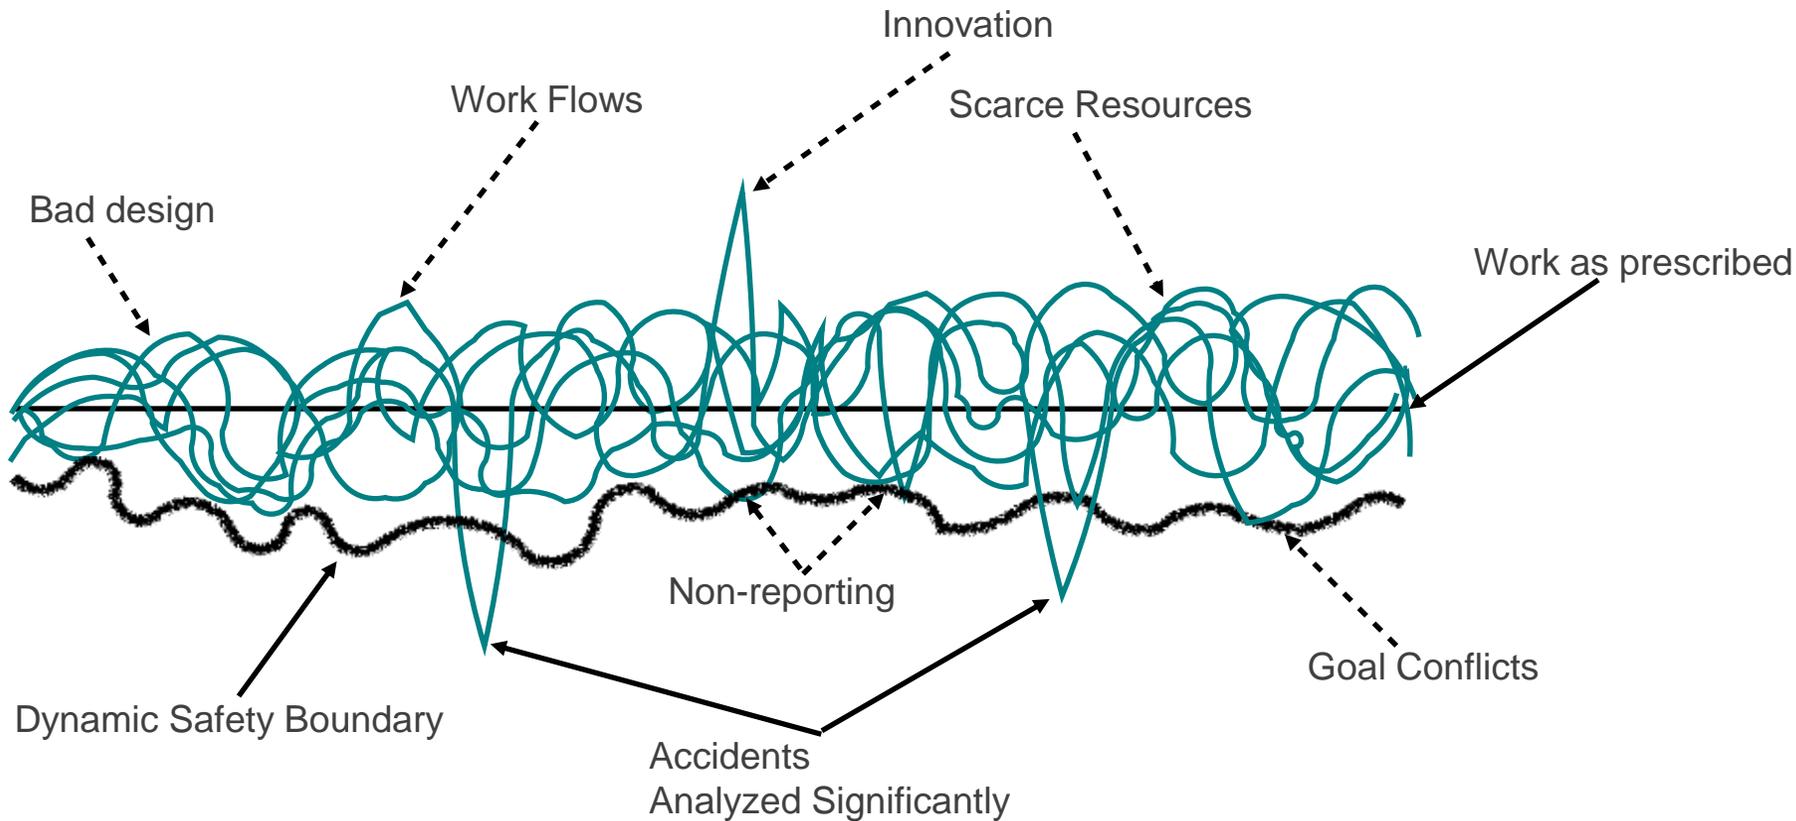

# COMMON FUNDAMENTAL ASSUMPTION

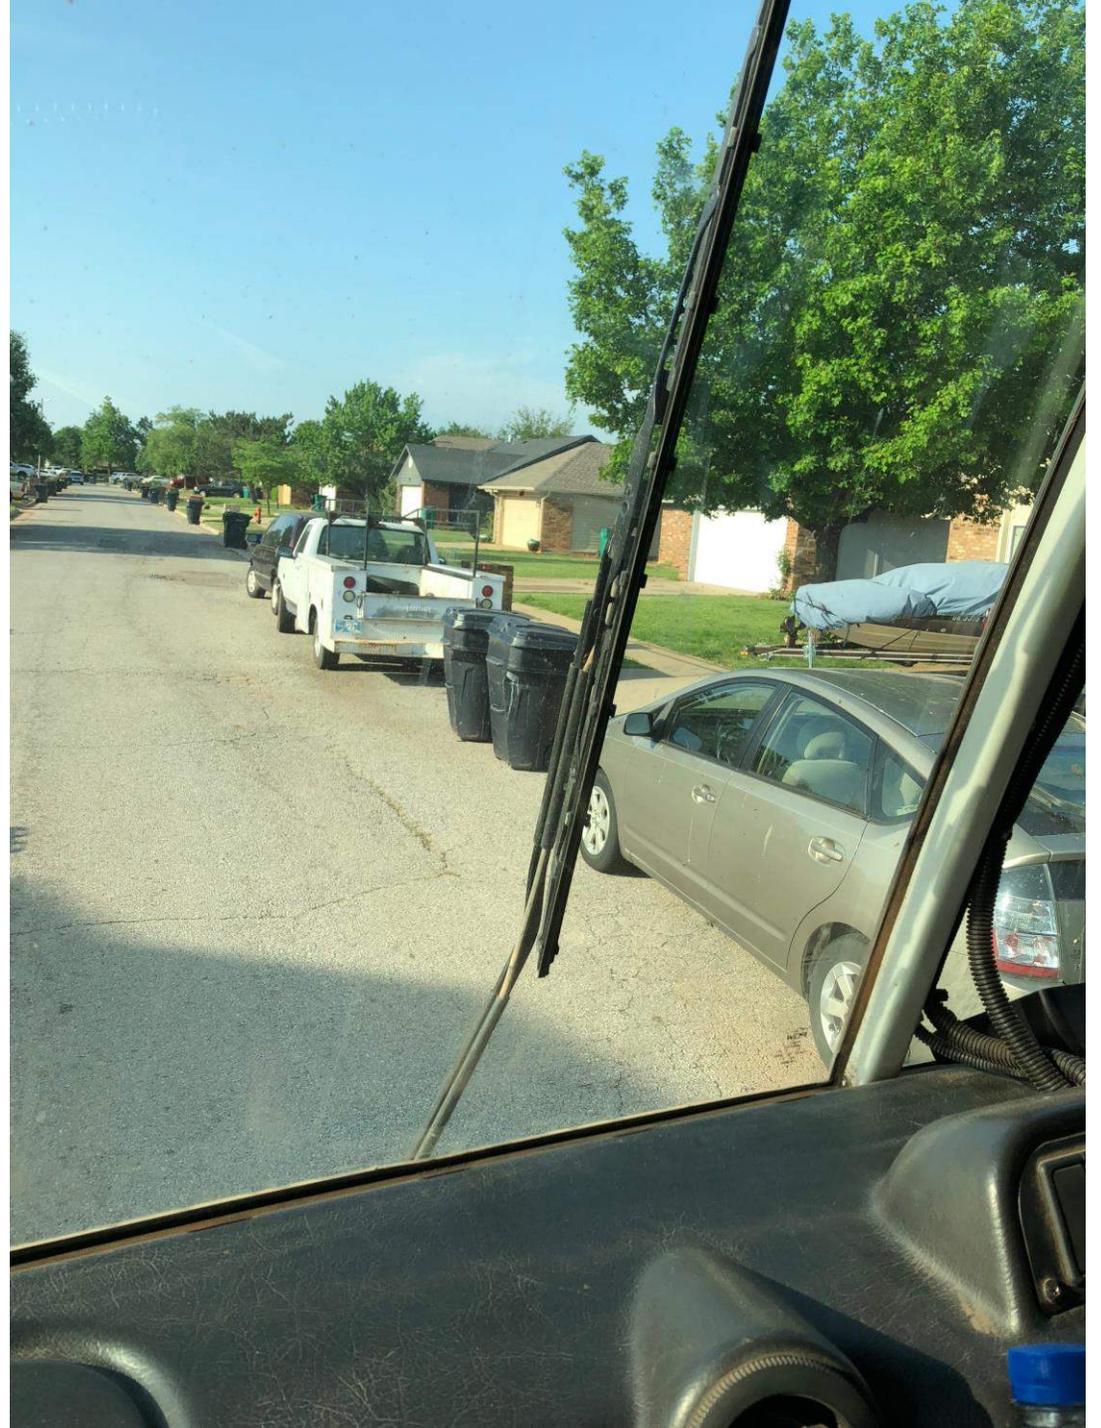

Success and failure are two completely different modes of functioning.

(Hollnagel, 2012)

# REAL WORK IS MESSY

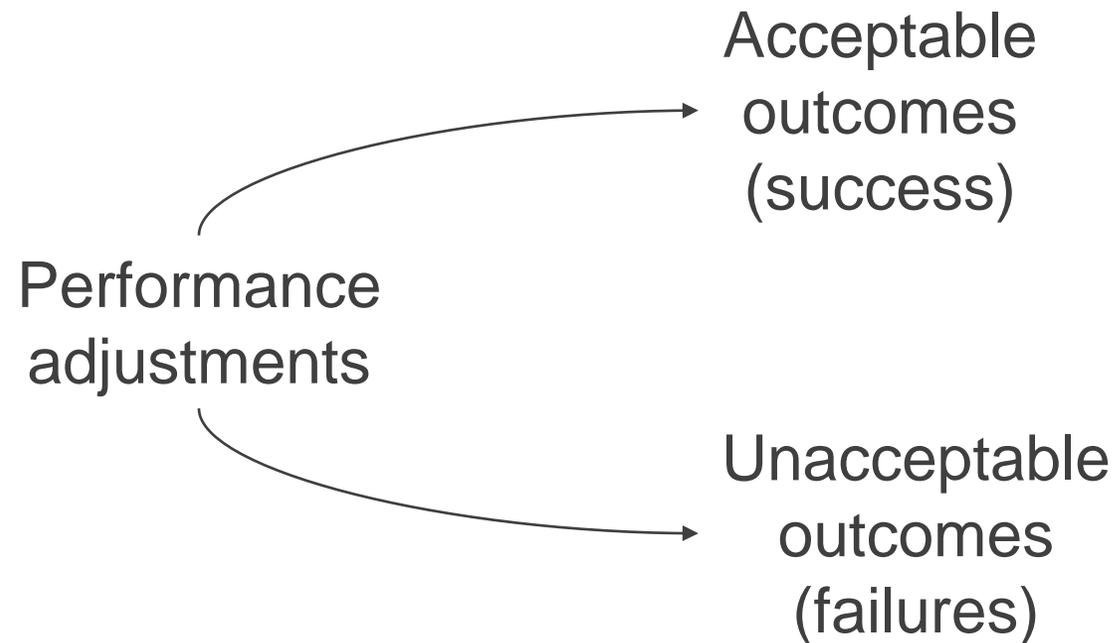

# THE REALITY OF WORK

---

**Success and failure emerge from the same conditions**

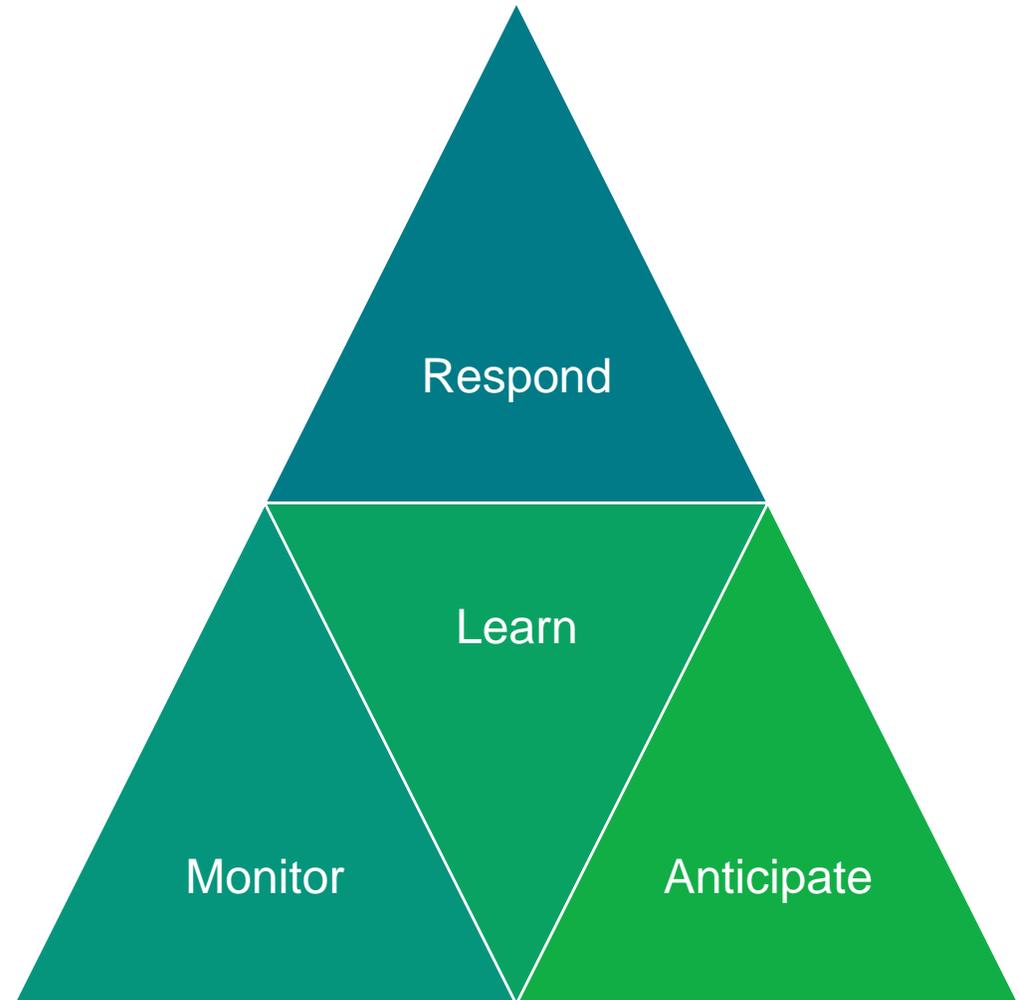

# RESILIENCE ENGINEERING

---

## Resilience

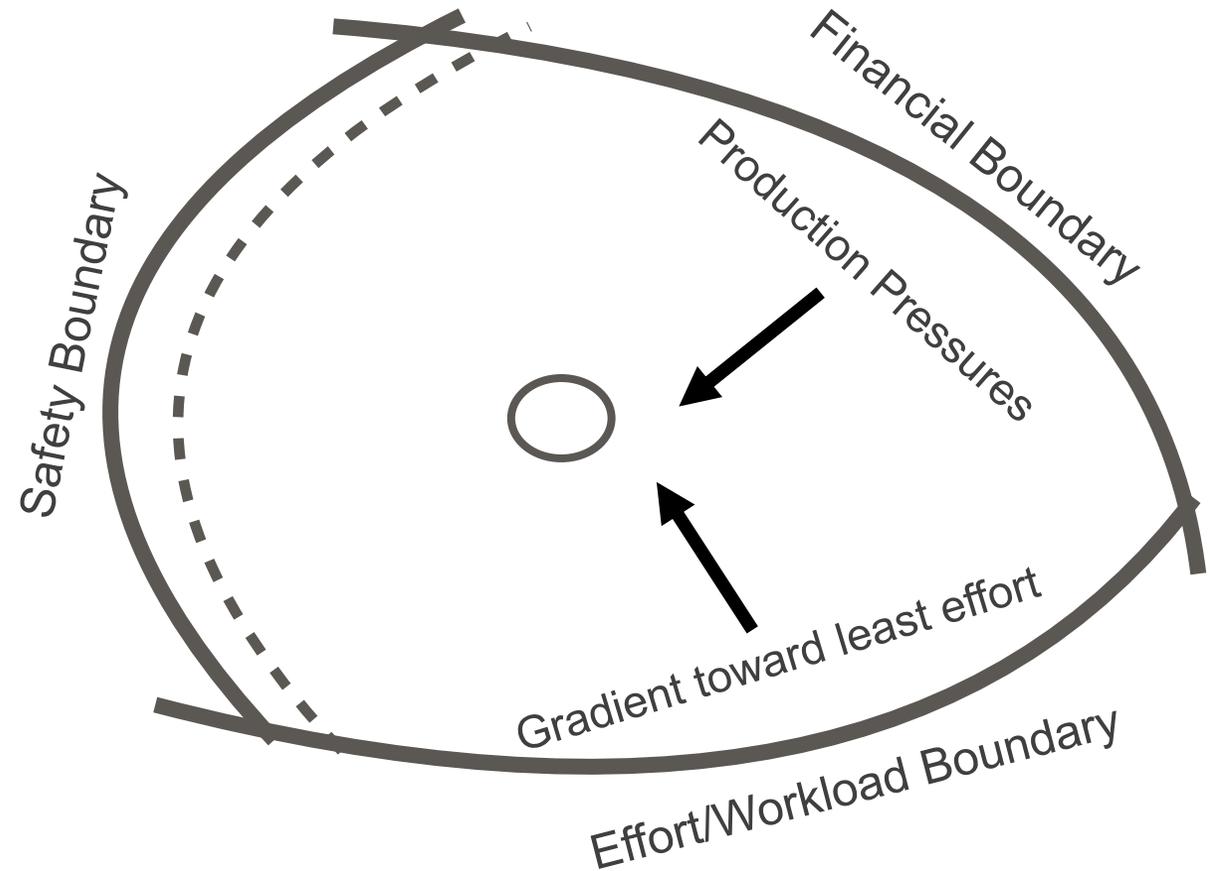

The capacity to be successful in varying conditions.

# CAPACITY FOR MANEUVER

We don't manage  
**accidents** or **risk**...

We manage the  
**capacity** to do work.

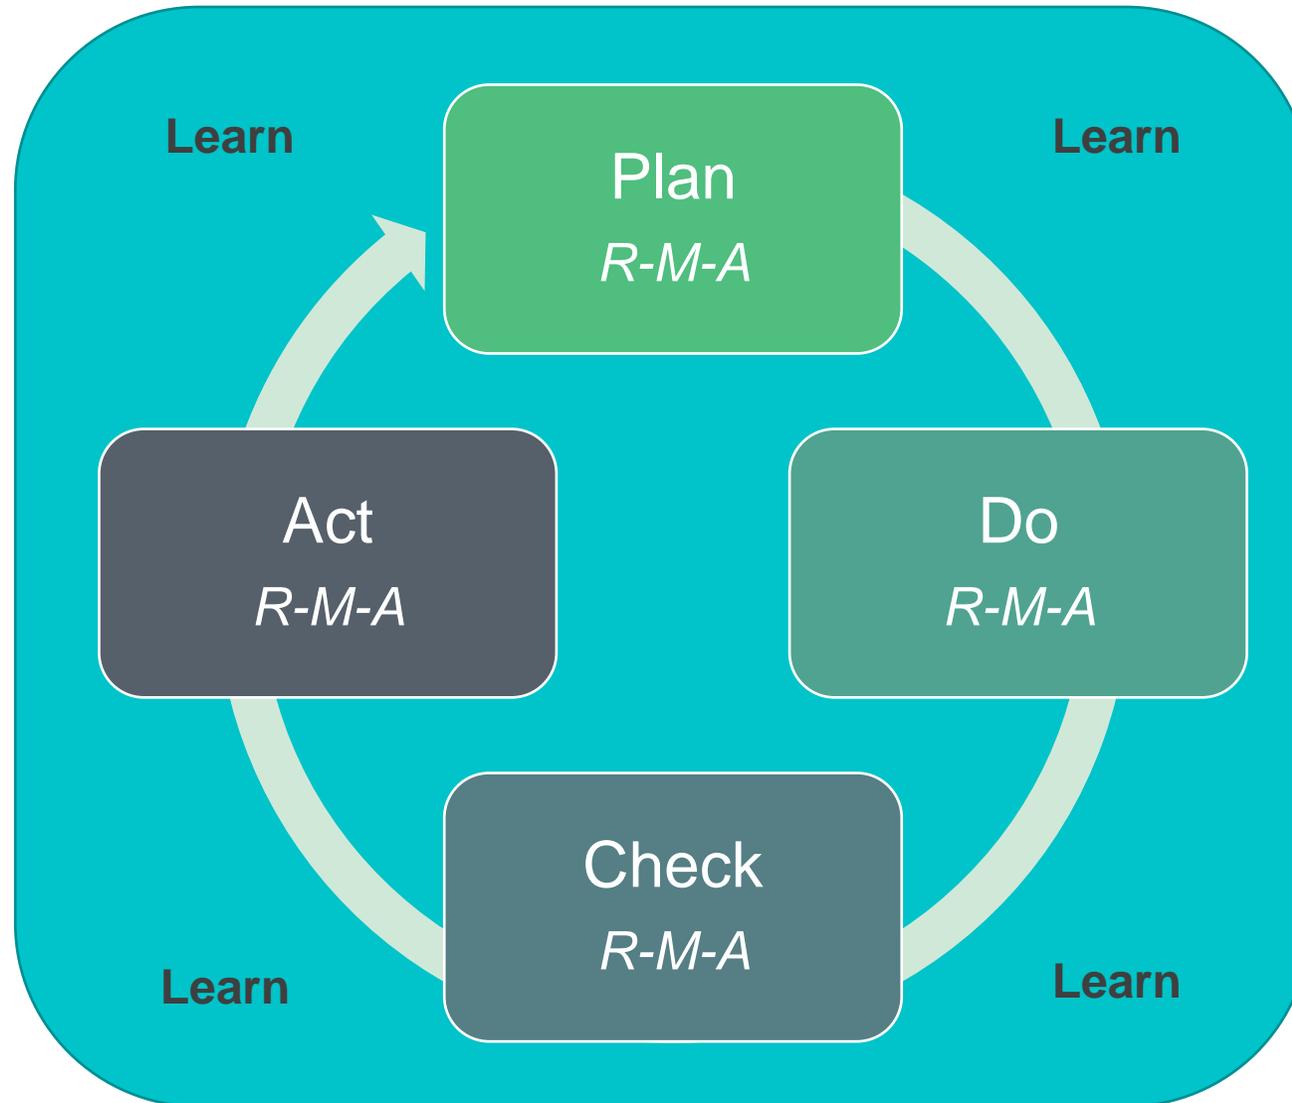

# BASIC RECOMMENDATIONS OF RESILIENCE ENGINEERING

---

- Focus on the functions of the organization, i.e., work, as opposed to hazards and risks.
- Look for sources of brittleness.
- Reward initiative and helping behaviors.
- Create capacity within the system to adapt to changing conditions.
- A key capacity is to learn about what's happening.

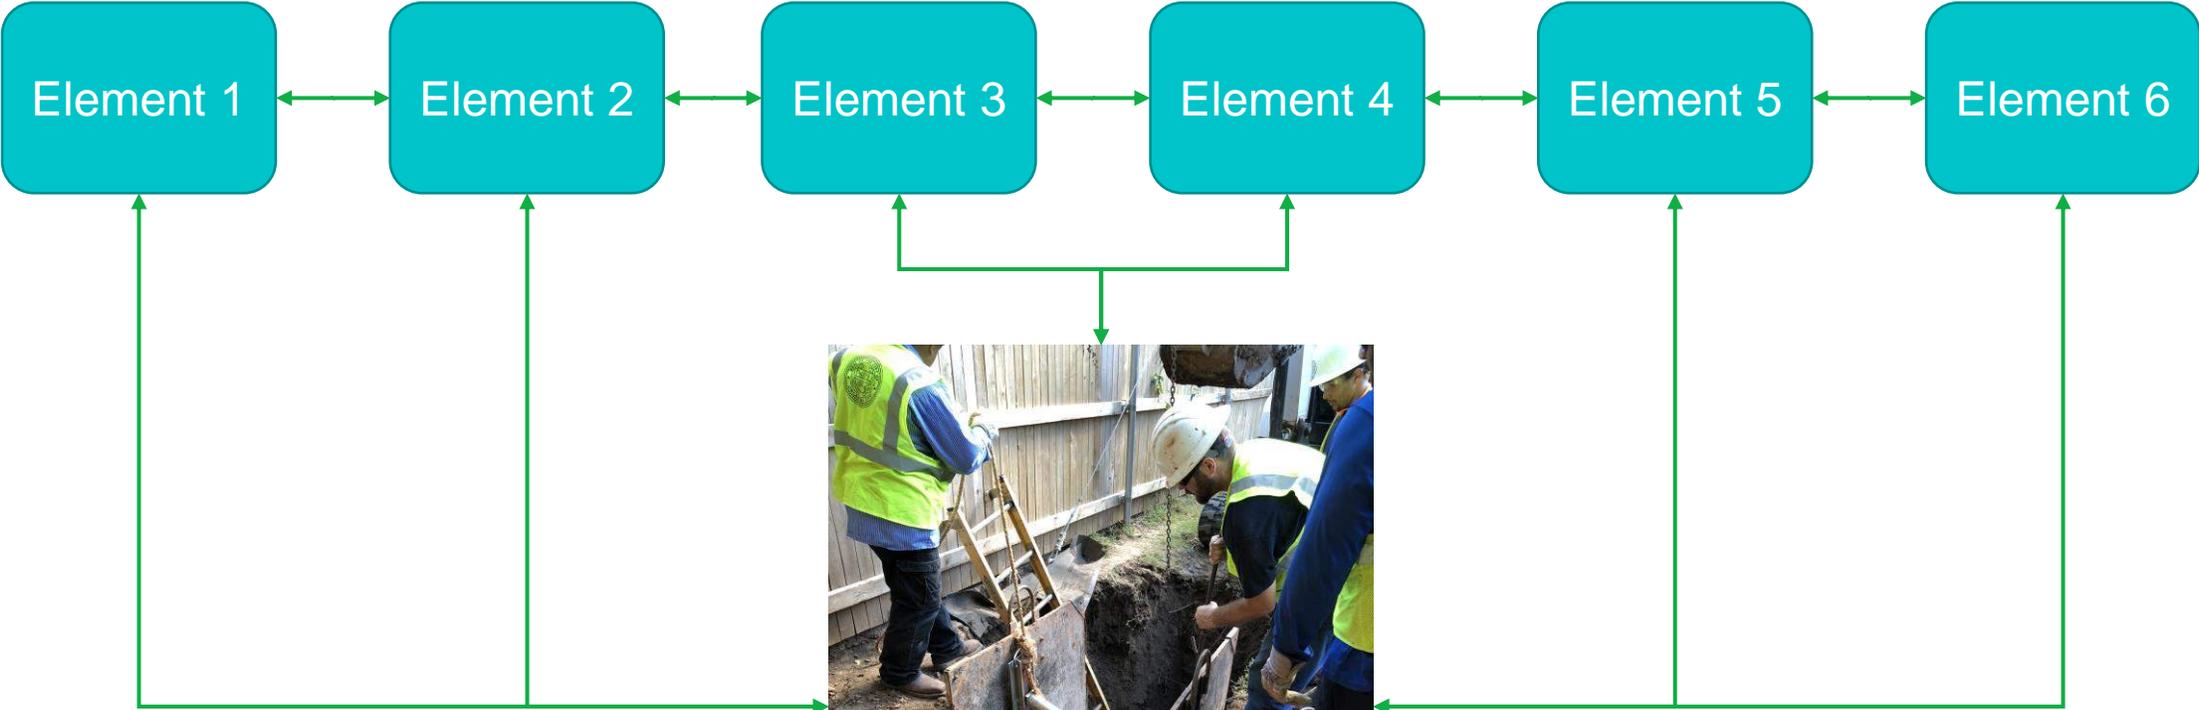

# RESILIENT SMS

# COMPARISON

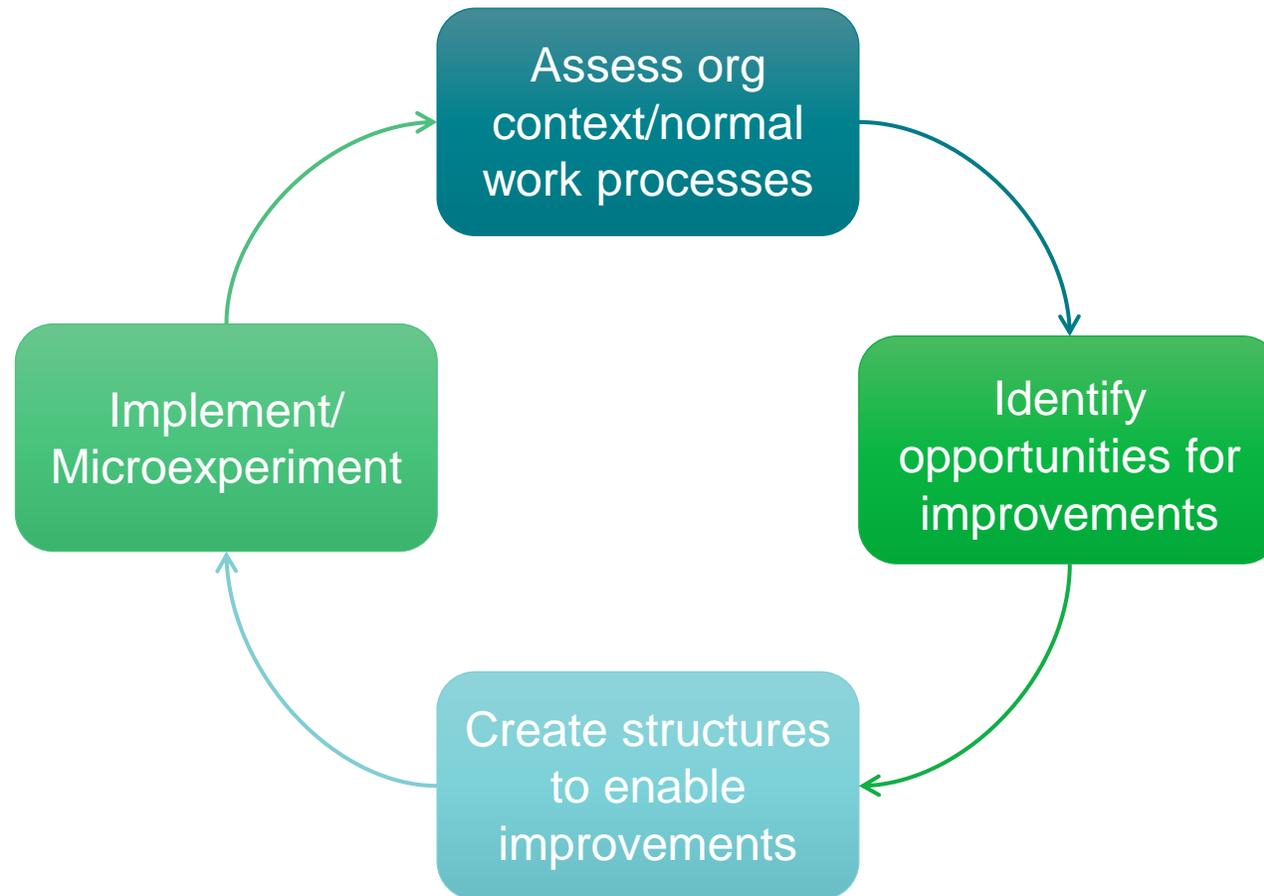

| Brittle SMS                                  | Resilient SMS                                      |
|--|--|
| Systematic                                   | Systemic   |
| Safety is defined by its absence             | Safety is defined by its presence                  |
| Pay attention to hazards and risks           | Pay attention to work                              |
| Focus on developing and maintaining controls | Focus on developing and maintaining capacity       |
| Static                                       | Dynamic  |
| Learn to find deviations from the standard   | Learn to find out what's happening                 |
| The whole is the sum of the parts            | The whole is the result of non-linear interactions |

# EXAMPLE - AUDITS

# RESILIENT SMS

---

# RECOMMENDATIONS

---

1. Change the focus of your SMS to building the capacity for resilience.
2. Use work as the primary focus in your organization.
3. Decentralize decision making and build collaboration as much as possible.
4. Use your SMS to identify and manage capacities (and threats to capacity).
5. Continuous improvement requires continuous learning.
6. Focus on what we are trying to achieve and how to get there.
